The _layouts folder has all the files for email (ie: font, images, etc) In the email, I have the following text: "Hi {name}, Thank you for your order. Do not forget to leave us a review on Apple App Store. Have a nice day" I need to translate the text for the foreign language of my site. I have found this on stackoverflow: But it works only if I already have the translation file. I tried to use an external.xml translation file, but I couldn't manage to apply it (I know how to do it). I need to get the translation of the text from the _layouts/sitemail.html file. How can I achieve this? If you are not connected to the internet, then download the EXE file from our website, and install it to your computer. Enter "Demo" and enter any two numbers. The file will generate two numbers. The figures will display below: "Guarantee: 2." After the decimal points appear, you enter the first number and press [Enter] and the system generates the required figures. The figure will display: "2." Program Features The first number is the time of the first payback. The second number is the time of the first reversion of the payback. A: This is a known security weakness in the free trial version of Autodesk's AutoCAD. The time value is calculated by using a very old, unpatched version of the Interlocked.Add() function, and the bug results in a huge time range (e.g. from 2nd January 2008 to 11th March 2012) being generated if the user types in two randomly selected numbers, and the first number is the day on which they were generated. The user will be prompted to enter the first number, enter the second number, then click [OK]. At that point they will receive a message that says "Value OK! The time between the first payback and the first reversion has been determined. You have 10 days to continue." *u - 8*u + 0*u - 8*u - 10*u. -24*u Collect the terms in -325*r + 117*r - 50 - 48 + 98. -208*r Collect the terms in 13*m - 7*m + 13*m - 3*m + 0*m. 16*m Collect the terms in 1167*x**3 - 1526*x**3 - 986*x**3. -1363*x**3 Collect the terms in 16*d**3 - 46*d**3 + 14*d**3 + 13*d**3. -3*d**3 Collect the terms in -11*u**2 - 36*u**2 + 2*u**2 - 13*u**2. -58*u**2 Collect the terms in -96 + 96 + 52*z**2 + 3*z. 52*z**2 + 3*z Collect the terms in -8*
