
Crystal Reports No Export Dll Found

We have a report that we can export from many PCs. . There are 10-15 u2f*.dll files on the server in the WINNT\Crystal directory. These files are used to determine if Windows is running on a network. Currently, WinGate comes with a key that only allows you to use u2f files on a server on the network. You cannot use them offline. To use this key, you must have administrator rights. The key works as follows: 1. You define a file in the WINNT\Crystal\u2f*.dll directory 2. WinGate reads the file and determines if Windows is online 3.
