The Top 10 AutoCAD Features that Will Help You Design for Life You'll be hit with at least one challenge per day of your life. One is change. The next is growth. The last is relevance. - Susan Greenfield, "The Mind of the Designer" AutoCAD is a desktop and web-based computer-aided design and drafting application. AutoCAD is best known for its role as a major CAD platform. In the United States alone, AutoCAD is the most widely used CAD platform, with 300,000 registered users. AutoCAD is used as a platform for most major design projects and many daily tasks. It is also used in industry for engineering and architectural tasks. AutoCAD has its roots in the earliest days of CAD, when it began as a large-scale and extensive vector-graphic CAD application. It was originally developed by BBN and then was acquired by Autodesk in 1980. AutoCAD was the first product to be developed with a new methodology that became known as the "software factory" approach. The "Software Factory" Approach to AutoCAD The Software Factory approach uses an Integrated Development Environment (IDE) to facilitate development of a computer application. The first CAD software factory to be developed was at Autodesk's Almaden Research Center in the late 1970s. At that time, the "Software Factory" was only partially developed. It took another 10 years to fully develop the concepts to form a viable application. The AutoCAD software factory was originally known as "AppBuilder" and was used to create specialized CAD software applications. The first products developed were CAD design and drafting applications and, later, CAD visualization applications. One of these products was Autodesk Navisworks, which is now a successor to AutoCAD. AutoCAD's "Software Factory" methodology was first published in 1984 as AutoCAD Engineering, and a follow-up article, AutoCAD for the Production Shop, was published in 1985. Subsequent articles expanded on these ideas to create the concepts of a software factory. This software factory included a first-class development environment that integrated programming, drafting, design, and quality control into the software development process. AutoCAD, like the "software factory" approach, has evolved significantly over the past three decades. AutoCAD is currently the world

It's been just over a month since the team finished 2013 with a 0-12 record, but the Colorado Rockies are already looking ahead to the 2014 season. Manager Walt Weiss, general manager Dan O'Dowd and the coaching staff have been busy conducting organizational meetings. What do the Rockies have planned? According to Weiss, "We've talked about how we want to play. We want to play an aggressive, hard-nosed, physical style of game." But Weiss and O'Dowd know that simply scoring more runs won't be enough. "We need to get to .500 [and] we need to go at it the right way," Weiss said. "We need to compete, we need to get better, but we also need to make it a fun environment to watch our players go out and perform." The Rockies' struggles last season were predictable. After losing 91 games the previous two seasons, the team was going to struggle this year regardless of how much talent they had on the roster. A team isn't built around one good player, however. "To build a winning baseball team you have to build it around everybody," Weiss said. "You need your guys to play and play the right way and have a good attitude. For the most part, last year was our first year as a baseball team. But now it's about getting better each day, making sure we're getting better each day as individuals and as a group." One of the biggest changes is the face of the team. "I think we've got good players," Weiss said. "I think we have players that have done a good job in the past. I think we have players that have been good role models for this organization in the past. I think we have good pitchers and guys who are going to be with us in 2014." Weiss said he likes the makeup of the 2014 team better than the 2013 team. He said it's easier for a coach to "get in and get out" of a lineup and that will be important considering the injury-plagued 2013 season. "If I had to put my money on it," Weiss said, "the guys have a better chance of winning as a baseball team next year." We'll be eating leftover food from the restaurant so that we don't have to leave a tip (although we'll still tip the waitstaff for the service they give us). We'll be enjoying the good company of our
