This article reviews the current

knowledge on how stress hormones may play a role in common sleep disorders including sleep apnea. Particular emphasis is given to the stress-induced nocturnal surge of norepinephrine and cortisol. In spite of the high prevalence of sleep apnea in the general population and of the adverse effects of untreated sleep apnea on sleep, sleep architecture, and daytime functioning, many physicians are unaware of the simple, non-invasive tools to screen for this disorder. The need for clinical vigilance in the diagnosis of sleep apnea is underscored by the fact that sleep apnea af5dca3d97
